

fieldlook.com

*the actual
growth information
of your crops*

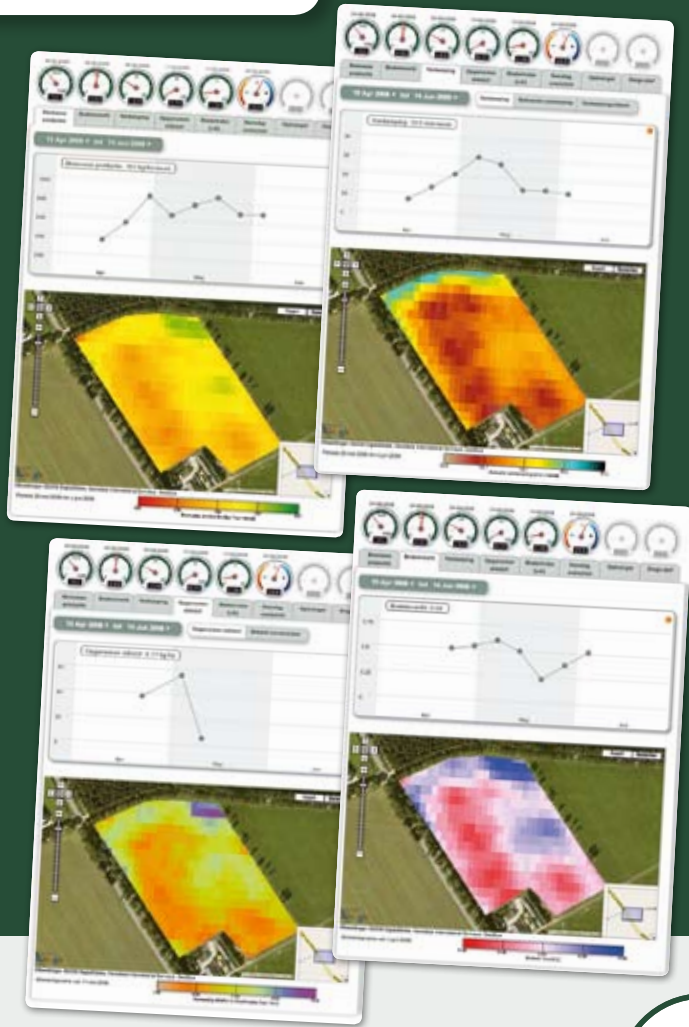

• accurate • detailed • reliable • on time

KNOWLEDGE IS POWER, AFTER ALL.
Satellites measure data of the crops on your fields. Using the newest technologies Fieldlook translates this data into information that you can use directly to improve your crop yield even as your crops are still growing.

Fieldlook offers:

- 10 growth parameters
- each visualized in a graphic (historical review) and a map, pixels 10 x 10 meter
- update frequency: monthly, 2-weekly or weekly

STANDARD PACKAGE

GROWTH PARAMETERS:

- biomass production (kg/ha/week)
- soil moisture
- evaporation (current evaporation, reference evaporation, evaporation shortage)
- nitrogen content (absorbed Nitrogen, and Nitrogen concentration in the top leaf layer)
- leaf area index (LAI) and vegetation index
- surplus rain

Additional options are:

- yield in kg/ha (for potatoes, beets, and wheat)
- dry matter content (for potatoes)

fieldlook.com

Available in your area

The technology behind Fieldlook is unique in providing absolute figures (eg. kilograms per hectare) without field intervention. Therefore it's available worldwide, accounting the minimum conditions.
